

Why Companies Buy Process Control Boards

- Reduce line downtime cost (\$5,000 per minute not uncommon)
- Reduce material scrap through real-time parameter monitoring & alerts
- Early, remote warning alerts of variance in critical processes
- Instant availability of production information for managers and workers
- Team building / morale boosting
- Quicker line changeovers
- Real-time, broadcast display of line and employee production rates
- Reduce overages through messages & alarms triggered by flow rate data, clock information, etc.
- Safety alerts
- Increase team productivity by competitive performance monitoring
- Replace whiteboard-style line scheduling with automatic displays
- "Central Station" monitoring of critical process parameters throughout the plant
- Clean room conditions monitoring: temperature, humidity, particulates
- Water quality monitoring – coliform, nitrates, lead

• And many, many more!
